

# ACCELERATE INNOVATION IN MANUFACTURING

Boost Productivity, Enhance Collaboration,  
and Protect Intellectual Property with  
NVIDIA Virtual GPU Solutions

Compressing design cycles and reducing unit costs are crucial for maintaining the competitiveness of any manufacturer. Designers face growing pressure to rapidly deliver innovations, respond to market demands, and support an ever-expanding product range—often in geographically dispersed teams. With virtualization, manufacturers can now better meet the needs of users who can't afford to wait for multiple, hour-long downloads of data before they begin the real design and engineering work.

At the same time, ensuring data security is of paramount concern as manufacturers look to protect intellectual property. This is further compounded by the growing need for remote workers, external suppliers, and partners to quickly and securely access the right data—posing significant IT challenges for enterprises. Manufacturers need solutions that support mobility and collaboration, allowing teams to be productive on any device without sacrificing the security of intellectual property.

- > Enabling remote, work-from-anywhere environments has become increasingly important in light of the COVID-19 pandemic. According to **Gartner**, it's estimated that 48% of employees will likely work remotely at least part time after the pandemic, compared to 30% pre-pandemic.

## NVIDIA VIRTUAL GPU TECHNOLOGY FREES MANUFACTURING TEAMS FROM PHYSICAL WORKSTATIONS, ENABLING SECURE COLLABORATION FROM ANYWHERE

Manufacturers are embracing virtualization solutions to help mobile and distributed teams collaborate on the design and production of a wide range of products—from aerospace and aviation to automotive and industrial machinery. However, the sheer size of the 3D models required for this work, combined with workstation performance and network limitations, means that loading times can be excessive. This can result in lost production time. By adding NVIDIA virtual GPU (vGPU) technology to their virtual desktop infrastructure (VDI) environments, manufacturers are realizing significant benefits, including improved productivity, more effective collaboration with distributed teams, and increased data security.

The value of virtual GPUs has been considerable, including:

- > **Enhanced Productivity with Real-Time Performance.** Manufacturers can deliver superior graphics performance to designers and engineers on virtual desktops from the data center with the same responsive experience that they would expect from a physical workstation. Users can also view and work with large 3D models and graphics-intensive applications without lag or delay. This translates to increased efficiency and productivity, ultimately helping manufacturers bring products to market faster. Multi-vGPU support—the ability to assign multiple NVIDIA GPUs to a single virtual machine (VM)—makes it possible for engineers to work with even larger models and achieve exponentially faster processing of computations.
- > **Ability to Collaborate Anywhere, on Any Device.** Engineers and designers can now be freed from their physical workstations and use thin clients—or the device of their choice—to access the applications and data they need, regardless of their location. Also, geographically-dispersed teams no longer need to wait for large file transfers and model loading. With files and data centralized in the data center or cloud, teams can securely access the information they need to work together from anywhere.
- > **Protect Intellectual Property.** Manufacturers can protect their IP without needing to issue company laptops to external contractors or remote workers and assume the risks associated with supporting that model and application. By centralizing data and moving mission-critical files into the data center, manufacturers secure their IP while speeding the design process. Employees gain mobility and autonomy through secure and instant access to the applications they need to get products to market as quickly as possible.
- > **Consolidated PLM Data for Greater Consistency.** As design and engineering resources become more dispersed, maintaining consistent and uniform data in product lifecycle management (PLM) databases becomes increasingly difficult. Centralizing PLM solutions in the data center allows for greater consistency and consolidation of data, as well as control over design changes. Moreover, virtualized desktops enable faster access and response times to PLM databases, letting PLM administrators shave seconds off database transactions, which results in significant savings in time and money.

## WHAT IS GPU VIRTUALIZATION?

GPU virtualization enables every virtual machine to leverage the performance of a GPU just like a physical desktop, workstation or server. Because work that is typically done by the CPU is offloaded to the GPU, the user has a much better experience and more users can be supported.

# NVIDIA VIRTUAL GPU SOLUTIONS

<h2>NVIDIA RTX vWS</h2> <p>NVIDIA RTX™ <b>Virtual Workstation</b> (vWS) provides traditional workstation graphics users access to a secure, data center-delivered virtual workstation for their 3D CAD/CAE applications, in a virtualized environment, with all of the required performance.</p>	<h2>NVIDIA vPC/vApps</h2> <p>NVIDIA <b>Virtual PC and Virtual Applications</b> (vPC/ vApps) enable a high-quality virtual desktop experience for knowledge workers in finance, human resources, marketing, and other users of office productivity applications. Electronic Design Automation (EDA) engineers and designers that require Linux-based development environments can also increase productivity by utilizing the native-like experience that NVIDIA vPC and vApps software provides.</p>
<h3>BENEFITS</h3> <ul style="list-style-type: none"> <li>Faster 3D model loading access and response for engineers and designers</li> <li>PLM data consolidation for more consistency</li> <li>Support for multiple NVIDIA GPUs in a single VM, to power the most demanding workflows</li> <li>More secure access for external suppliers and contractors</li> <li>Better protection for data and intellectual property</li> <li>Higher user acceptance for virtual workstations</li> <li>Faster applications performance due to reduced data movement</li> <li>Performance scalability</li> <li>Support for multiple and high-resolution displays, including up to two 8K or four 4K displays</li> <li>Increased employee mobility</li> <li>Central management of business continuity and disaster recovery</li> <li>Cloud readiness</li> </ul>	<h3>BENEFITS</h3> <ul style="list-style-type: none"> <li>Anytime, anywhere access to virtualized graphics design applications for an increasingly mobile workforce</li> <li>Support for the increasing graphical requirements of Windows, streaming video, and modern productivity applications</li> <li>Support for multiple high-resolution displays, including up to four HD monitors, two 4K monitors, or a single 5K monitor, for increased productivity</li> <li>Cost-effective solution to scale VDI across your organization</li> <li>Lower IT management costs</li> <li>Security enforced in the data center</li> <li>Increased employee and contractor mobility</li> <li>Business continuity and disaster recovery managed centrally</li> <li>Reduced downtime, even during maintenance with live migration</li> </ul>
<h3>COMMON APPLICATIONS</h3> <p>ANSYS Fluent, Autodesk AutoCAD, Autodesk 3ds Max, Dassault Systèmes CATIA, Dassault Systèmes SOLIDWORKS, PTC Creo, Siemens NX</p>	<h3>COMMON APPLICATIONS</h3> <p>Adobe® Creative Cloud®, Microsoft Office</p>

## CUSTOMER EXAMPLES

Honda deployed next-generation engineering VDI powered by NVIDIA virtual GPUs to enhance productivity and operational efficiency for R&D/production centers. With graphics acceleration in the data center, NVIDIA virtual GPUs empower teams to use CAD/CAE applications on any device—even low-cost laptop computers. Additionally, Honda IT can allocate the right level of performance for power users and knowledge workers alike. Across all Honda group companies, more than 4,000 VDI systems are experiencing better application performance and user experience, as well as faster access to data and enhanced security of IP.

Honda R&D Co. Ltd.  
Wako-shi, Japan

Nordam implemented a VDI-based NVIDIA RTX Virtual Workstation (vWS) solution to enable full graphics acceleration and workstation-class performance while enhancing security. Now, engineers and designers can access applications and data from anywhere in the NORDAM network without being tied to multiple workstations per user. Multiple users can share the same desktop, fostering collaboration and training on a level never before seen at the company. By replacing up to two workstations and six monitors per user with an entry-level PC or thin client, NORDAM has freed up valuable desk space while significantly reducing hardware and management costs.

Nordam  
Tulsa, OK, USA

PSA Peugeot Citroën deployed a 3D virtualization project powered by NVIDIA virtual GPUs to give designers direct access to high-performance virtual workspaces from anywhere and on any device, while boosting hardware utilization and efficiency. With NVIDIA virtual GPUs, latency was reduced to 15-30 ms at distances of up to 500 kilometers from the Paris data center, allowing remote workers to run graphics-intensive applications at local-device response times within that radius. PSA design engineers can now run high-end graphics applications on remote devices with no loss in quality, improving productivity, while also receiving the security, ease of management, and disaster recovery benefits of a data center.

## KEY MANUFACTURING USER GROUPS

	Engineers, Designers, CAE/CAD Users	Creative, Design, Knowledge Workers
<b>USE CASES</b>	For rendering or remotely viewing and editing very large 3D project files and images	For general purpose VDI, using Windows and virtualized design and creative apps, such as Adobe Creative Cloud or entry-level CAD virtual workstations for light users
<b>RECOMMEND</b>	vWS on A40 <i>(supports up to two 8K displays)</i>	vPC/vApps on A16 <i>(supports up to four HD or two 4K displays, or one 5K)</i>

## HOW NVIDIA VIRTUAL GPU WORKS

In a VDI environment powered by NVIDIA virtual GPUs, the NVIDIA virtual GPU software is installed at the virtualization layer along with the hypervisor. This software creates virtual GPUs that enable every virtual machine (VM) to share the physical GPU installed on the server. The NVIDIA virtualization software includes a graphics driver for every VM. NVIDIA vWS software includes the powerful RTX Enterprise driver. Work that is typically done by the CPU is offloaded to the GPU, providing a much better experience and demanding engineering for creative applications now supported in a virtualized and cloud environment.

## WHAT MAKES NVIDIA VIRTUAL GPUS POWERFUL?

### EXCEPTIONAL USER EXPERIENCE

Superior performance, with the ability to support both compute and graphics workloads for every vGPU

### PREDICTABLE PERFORMANCE

Consistent performance with guaranteed quality of service, whether on-premises or in the cloud

### BEST USER DENSITY

The industry's highest user density solution, with support for up to 64 virtual desktops per GPU, plus lower TCO with more than 9 vGPU profiles for the most flexibility in provisioning resources to match your users' needs

### OPTIMAL MANAGEMENT AND MONITORING

End-to-end management and monitoring that delivers real-time insight into GPU performance, as well as broad partner integrations so you can use the tools you know and love

### CONTINUOUS INNOVATION

Regular cadence of new software releases that ensures you stay on top of the latest features and enhancements

### BROADEST ECOSYSTEM SUPPORT

Support for all major hypervisors and the most extensive portfolio of professional apps certifications with RTX Enterprise drivers
